DESCRIPTORS: Drugs, \*Guanethidine, \*Glaucoma,  
\*Oligosaccharides, \*Eye, Autonomic nervous system.

A report is given on guanethidine (Ismelin, CIBA), a  
drug with a sympatholytic effect which on local ap-  
plication causes lowering of the intraocular tension in  
the normal eye as well as in eyes affected with simple  
glaucoma or secondary glaucoma. The effect might be  
due to a decrease in the outflow resistance of the  
aqueous humour. Its advantage over pilocarpin con-  
sists in the longer-lasting action, the less significant  
miosis and in the fact that accommodation remains
